

27th November, 1953.

My dear Burnaby,

I am sending herewith a copy of "Dispersion on a sphere" and wonder if it would help geophysicists to provide tables on some of the functions. So far I have been deterred from doing this by the fact that the exact analytical operations of the last section, e.g. when  $k \ll$  would be very involved, and it is just such exact values that tables ought to give. Perhaps the electronic computers will come to the rescue.

Sincerely yours,
